Economics

TD Second Part: Fiscal Multipliers (Weeks 6 to 10)

Part I

- Exercise I: Habit Persistence and The Keynesian Multiplier (Week 6)
- Exercise II: A Benchmark Model (Week 7)
- Exercise III: Consumption, Labor Supply and the Multiplier (Week 7)

Part II

- Exercise I: Taxes on the Labor Input and the Multiplier (Week 8)
- Exercise II: Public Spending in Utility Function and the Multiplier (Week 8)
- **Exercise III: Labor Supply, Public Spending in Utility and the Multiplier** (Week 9)

Part III

- Exercise I: Endogenous Public Spending (Week 9)
- Exercise II: Externality in Production and the Multiplier (Week 10)
- Exercise III: Externality in Labor Supply and the Multiplier (Week 10)

Exercise III: Labor Supply, Public Spending in Utility and the Multiplier

The Economy

Utility:

$$\log \left(c_t^* - \frac{\eta}{1+\nu} n_t^{1+\nu} \right) \text{ where } c_t^* = c_t + \alpha_g g_t$$

Budget constraint:

$$c_t \leq w_t n_t + \Pi_t - T_t$$

Production:

$$y_t = a n_t$$

Profits:

$$\Pi_t = y_t - w_t n_t$$

Government budget constraint:

$$g_t = T_t$$

Market clearing:

$$y_t = c_t + g_t$$

Question 1. Determine the optimality condition of the households and then deduce the Marginal Rate of Substitution (MRS)

Answer: $\eta n_t^\nu = w_t$.

Question 2. Determine the optimality condition of the firm.

Answer: $w_t = a$.

Question 3. Determine the equilibrium output.

Answer: $n_t = \left(\frac{a}{\eta}\right)^{\frac{1}{\nu}}$ and $y_t = a \left(\frac{a}{\eta}\right)^{\frac{1}{\nu}}$.

Question 4. Compute the output and consumption multiplier and discuss the result.

- Multiplier is zero.
- Total crowding out of consumption.
- No income effects for labor supply (depends only on $w_t = a$).
- Constant income.
